Re: Martha Rose Chemical, Holden, Missouri - EPA Site ID: MOD980633069

Dear(b) (6)

On June 30, 2020, representatives of the U.S. Environmental Protection Agency collected indoor air and sub slab samples from your property as listed below. These samples were collected to evaluate vapor concentrations in indoor air at and beneath your building. The contaminants associated with the ongoing site investigation include tetrachloroethene (PCE) and trichloroethene (TCE). The samples were submitted for laboratory analysis of volatile organic compounds, including the site-related contaminants noted above. Results from these sampling events are summarized in the table below.

Sample Results:			PCE	TCE
(b) (6)	, Holder	n, Missouri	$(\mu g/m^3)$	$(\mu g/m^3)$
Resident Indoor Air Additional Assessment Level			42	- 2
Resident Sub Slab Additional Assessment Level			1,400	67
Sample Type	Sample ID	Collection Date	PCE Result	TCE Result
Indoor Air	8580-5	6/30/2020	1.3	ND

Notes: Sample ID = Sample Identification #

 $\mu g/m^3 = Micrograms per cubic meter$

ND = Not detected

Indoor air sample 8580-5 collected on June 30, 2020, from the interior of your home had a detection of PCE that is below EPA levels of concern.

As previously discussed, multiple rounds of sampling are anticipated to be needed to monitor concentrations. The EPA will be contacting you regarding future sampling events.
